

## SMART ANTENNA™

### QUICK START GUIDE

This guide provides the basic information you need to set up and begin using your new SMART ANTENNA. For more detailed information on the installation and operation of your receiver, please refer to the user manuals. The manuals and their latest updates may be found on our website at:

<http://www.novatel.com/Downloads/docupdates.html>

### DEVELOPMENT KIT BOX CONTENTS

If you purchased a Development Kit, the following is also provided with your SMART ANTENNA:

- 1 AC/DC adapter
- Bushing insert to adapt from 1" to 5/8" thread
- Magnetic mount
- 1 CD containing:
  - An installation program for NovAtel's GPS L1 graphical user interface software, *StarView*
  - Product documentation, including user manuals

#### RS-232:

- 1 multi-connector cable (7- or 6-pin connector to DB9 connector, 12V power connector and open end)

#### RS-422:

- 1 straight 15 m cable (12-pin connector to an open end which is for use with a user-supplied connector)
- 1 RS-422 to RS-232 converter

### ADDITIONAL EQUIPMENT REQUIRED

In addition to the equipment listed above in the *Development Kit Box Contents* section, you need the following for a basic setup:

- A Windows-based PC with an RS-232 DB-9 port
- One of the following:
  - A 120 V AC wall outlet
  - A standard 12 V DC power outlet, or
  - A +9 to +36 V DC power supply

### SETTING UP YOUR SMART ANTENNA

Complete the steps below to connect and power your receiver.

1. Mount the SMART ANTENNA on a secure, stable structure with an unobstructed view of the sky.
2. Connect the SMART ANTENNA to a serial port on the PC.

3. Connect the SMART ANTENNA to a power supply.

4. It is recommended that a back-up battery (3) is placed between the receiver (1) and its voltage supply (2) to act as a power buffer:

Normally when a vehicle engine is started, power can dip to around 9.6 VDC or even cut-out to ancillary equipment. Plug in the adapter and/or connect and turn on the power supply.

### INSTALLING STARVIEW

Once the receiver is connected to the PC and power supply, install the *StarView* software. The *StarView* CD is supplied with the development kits, otherwise *StarView* and its latest updates are available on our website.

To install *Starview* from CD:

1. Start up the PC.
2. Insert the *StarView* CD in the CD-ROM drive of the PC.
3. Install the *StarView* software by following the steps on the screen. If the setup utility is not automatically accessible when the CD is inserted, select *Run* from the *Start* menu and the *Browse* button to locate *Setup.exe* on the CD drive.

To install *StarView* from our website:

1. Start up the PC and launch your internet service program.
2. Go to our website at <http://www.novatel.com/Downloads/fswupdates.html> and scroll down to the *Superstar II Family Firmware/Software* section.
3. Download the *StarView* setup program and save it in a temporary directory (for example, C:\temp).

4. Use the setup program to install the *StarView* software by following the steps on the screen.

After installation, *StarView* also appears in the Windows Start menu at *Start | Program Files | NovAtel L1 Software*.

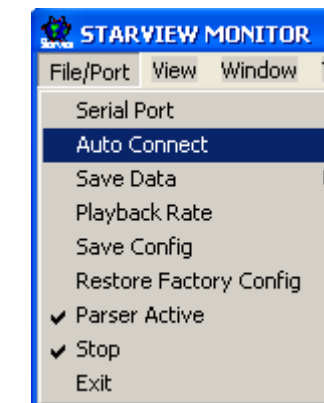

The most up to date version of *StarView* may be found on our website. Check our website for updates at:

<http://www.novatel.com/Downloads/fswupdates.html>

### ESTABLISHING COMMUNICATION WITH THE RECEIVER

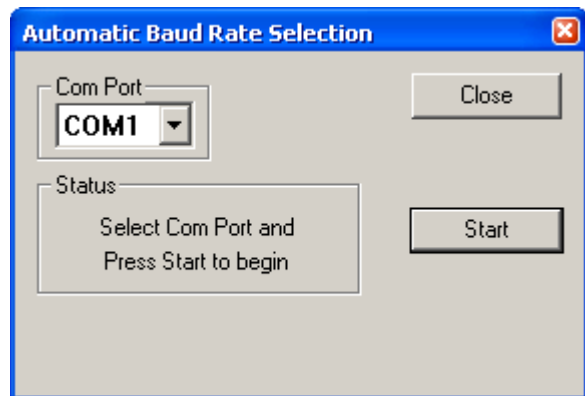

To open a serial port to communicate with the receiver, complete the following.

1. Launch *StarView* from the folder you specified during the installation process or from the Windows Start menu at: *Start | Program Files | NovAtel L1 Software*.
2. Open the *File/Port* menu and select *Auto Connect*.

The default data transfer rate is 9600 bps unless your receiver model has Carrier Phase Output (CP) capability with 19200 bps as the default. A list of models is in *Appendix A* of the *SUPERSTAR II Firmware Reference Manual*.

- Select the PC serial port the SMART ANTENNA is connected to from the *Com Port* drop-down list.

- Click on *Start* and *StarView* searches for the SMART ANTENNA on the specified port at various baud rates.

## USING STARVIEW

*StarView* provides access to key information about your receiver and its position. The information is displayed in windows accessed from the *Window* menu. For example, to show details of the GPS satellites being tracked, select *Channel | Channel Assignment* from the *Window* menu. Then in the window, right-click with your mouse and select *Continuous* or *One Shot*:

Channel Assignment Window - Msg 6 & 7						
Current Status						
Ch#	Sv#	SNR	Rsrud	Carr. Freq	Tk Status	Loc
01	24	43.2	0	3065	Measready	Trac
02	30	47.6	0	-2775	Measready	Trac
03	02	50.9	0	-1475	Measready	Trac
04	10	44.0	0	-4235	Measready	Trac
05	06	43.7	0	-3535	Measready	Trac
06	05	49.9	0	-75	Measready	Trac
07	09	43.1	0	3255	Measready	Trac
08	25	40.6	0	-2555	Measready	Trac
09	04	47.5	0	1865	Measready	Trac
10	07	42.6	0	2585	Measready	Trac
11	122	39.8	0	-425	Measready	Trac
12	134	37.8	0	-425	Measready	Trac

Similarly, select *Navigation | LLH Solution* from the *Window* menu and right-click to select *Continuous* or *One Shot*. The position of the receiver is displayed in LLH (latitude, longitude and height) coordinates.

Navigation Window (User Coor) - Msg 20	
Lat:	N 051 06'58.930" (Deg)
Long:	W 114 02'17.689" (Deg)
Alt:	1047.34 m
Velocity N:	0.00 m/s
Velocity E:	0.00 m/s
Velocity U:	0.00 m/s
HFOM:	0.85 m
VFOM:	0.92 m
Ground Speed:	0.00 m/sec
Track Angle:	0.00 rad
Nav Mode:	Diff. 3-D
DGPS Source:	SBAS
HDOP:	1.0
VDOP:	1.3
UTC Date:	2005-04-21
UTC Time:	20:37:03.999996955
Nb SVs used:	10
Up Hours:	47
Datum Number:	0
Confidence Level:	High
GPS Time Alignment:	Disable
System Mode:	Navigation
Tracking Mode:	All SVs in View

## DETERMINING WHEN THE POSITION IS VALID

The receiver is in *Navigation* mode whenever sufficient satellite information and measurement data is available to produce a GPS fix. When the receiver has a valid position, the *Nav Mode*

field in *StarView's* *LLH Solution*, or *XYZ Solution*, window shows *Nav 3-D*, *Nav 2-D*, *Diff. 3-D* or *Diff. 2-D*. If it shows *Initialized* or *Initialization Required* there is no valid position yet.

## ENTERING COMMANDS

The SMART ANTENNA uses a comprehensive command interface. Logs and commands can be sent to the receiver using the *Xmit Msg* and *Tool Setting* menus in *StarView*.

The following information is important when selecting commands:

- You can send a message request using one shot (Normal mode) or continuous (Special mode) by selecting *Xmit Msg | General Message Request* in *StarView*. Refer to the *SUPERSTAR II Firmware Reference Manual*, which shows how these modes effect individual commands and log requests differently.
- There is an option in *StarView* to save all messages transmitted by the receiver into a file. Select *File/Port | Save Data* after you have finished selecting messages in Step #2 above.

✉ The *SUPERSTAR II Firmware Reference Manual* provides details on messages and parameters that the SMART ANTENNA uses. It is available on our website at:

<http://www.novatel.com/Downloads/docupdates.html>

## ENABLING SBAS POSITIONING

SMART ANTENNAS are available with an SBAS option. The ability to simultaneously track two SBAS satellites, and incorporate the SBAS corrections into the position, is available on these models.

To enable SBAS, select *Tool Setting | DGPS Config* in *StarView*. Set the *DGPS Type* to *SBAS only* or *Automatic*. The receiver uses SBAS satellites in your coverage area.

Select *Window | Status | SBAS Status* to view the status of the SBAS messages. It shows the number of valid SBAS messages that are being decoded for a specific SV number. When the *Valid Messages* count is not incrementing, the receiver is not tracking any SBAS satellites.

When SBAS corrections are incorporated, the LLH solution shows a *Nav Mode* of *Diff. 3-D* and a *DGPS Source* of *SBAS*.

*StarView* allows you to deselect GPS or SBAS system satellites. Select *Tool Setting | Deselect | SVs* from the main menu.

Select *Tool Setting | Set Configuration* to update receiver configuration parameters such as maximum velocity, antenna type and navigation rate.

Refer to the *SUPERSTAR II Firmware Reference Manual* for an appendix on SBAS Positioning that includes an explanation of dynamic modes.

## QUESTIONS OR COMMENTS

If you have any questions or comments regarding your SMART ANTENNA, please contact NovAtel Customer Service using one of the methods provided below.
